

CUSTOMER PROFILE

How SustainIQ is helping Neilcott Construction to demonstrate the importance of ESG to Site Teams

BACKGROUND

Neilcott Construction Limited is a regional contractor delivering construction solutions across London and the Southeast. They specialize in education, residential, healthcare, and more. Neilcott is dedicated to achieving Net Zero Carbon by 2030 and has a Carbon Reduction Plan in place.

Ashleigh Goss, Sustainability and Submissions Director at Neilcott Construction spoke with us about her experience with SustainIQ and how the platform is helping to drive positive operational change for the organisation.

Speaking about the factors driving sustainability and ESG Reporting at Neilcott Construction, Ashleigh said *“ESG and sustainability is really important to Neilcott Construction because our client base is primarily public sector clients. We deliver a lot of education projects, new builds, refurbishments, affordable housing, healthcare and each of these public sector clients have their own obligations around the Social Value Act and Sustainability, alongside their own Net Zero carbon initiatives”*.

“As part of the tendering process and project delivery, we need to provide our clients with evidence that we’re providing value for money and are helping them to achieve their own sustainability goals. So having data that we can rely on and that we can use can convey our commitment to social value is absolutely vital to our offering.”

CHALLENGE

Demonstrating the importance of Sustainability and ESG Reporting to their own internal teams and suppliers has been a key challenge for Neilcott Construction.

“Although CSR and reducing environmental impact has been around for a while, the requirement for reporting and data has just increased exponentially, even over the last five years.”

Ashleigh Goss
Sustainability and
Submissions Director
Neilcott Construction

"Getting our site teams to really understand that this is an a fundamental part of our business requirement and value proposition to our clients can be quite challenging at times. People on site are naturally focused on their role so they just want to build things!"

"It's an ongoing educational piece to try and raise the profile of how important it is for our work winning strategy that we can evidence what we're doing in terms of social value, for example local procurement and local spend."

"Embodied and operational carbon is becoming more and more important to our clients. So, raising the profile and capturing that data at the lowest possible level is really important to us and it's something we're working on at the moment."

IMPACT

Speaking about the impact that SustainIQ has had on operations, Ashleigh said *"We are delighted to be working with SustainIQ and we are really looking forward to having that single source of truth for our data, that we can use to drive forward our own internal initiatives around EDI, mental health and well-being right through to embodied carbon of projects and capturing that all important supply chain data."*

LEARN MORE

SUSTAINIQ

SustainIQ is an integrated ESG reporting platform that unifies all aspects of an organisation's sustainability activities within a single environment. Businesses use SustainIQ to measure, monitor, and report on their social, economic, and environmental performance in real time.

Our software saves sustainability professionals from wasting time chasing teams, sites, and regions for reporting information. No more unreadable spreadsheets, awkward (and incorrect) calculations, and endless report building. With SustainIQ, simply pull, input or bulk upload data and get access to your custom-built report at touch of a button.
