Elliott Group launch SustainIQ at Cork Street Co-living, Dublin

SustainIQ - Elliott Group
Company Case Study

Elliott Group

ELLIOTT GROUP LAUNCH SUSTAINIQ AT CORK STREET, DUBLIN

Elliott Group are one of Ireland's longest standing Leading Contractors, with a history of delivering construction works for over 90 years since the 1920s. Elliott Group have achieved notable success and experience across a wide range of key construction sectors, servicing clients in Healthcare, Education, Commercial, Logistics and Data Centre industries.

Elliott Group are introducing SustainIQ across all their projects, launching the technology at their upcoming Co-Living Development on Cork Street, Dublin. The proposed 14,047 sqm development of Cork Street, centrally located in Dublin 8, just 1 km west of St. Stephen's Green, will principally consist of the construction of Build-to-Rent Shared Living Residential Development.

SustainIQ is the all-in-one ESG & sustainability reporting software that measures, monitors and reports on the social, economic, and environmental performance of businesses.

Challenges Elliott Group were having with ESG reporting

Prior to using SustainIQ, Elliott Group were facing a number of emerging challenges when it came to ESG reporting:

- Struggling to access ESG data to report back to private sector clients who increasingly required information.
- Using spreadsheets to report on a variety of areas that were not aligning coherently.
- Data being collated in different ways across different projects due to a lack of a standardised methodology for reporting.
- Impending EU regulatory requirements such as the Corporate Sustainability Reporting Directive (CSRD) placing new reporting pressures on the business.
- ESG data living in multiple business systems with no way of integrating data flows in to one central location.

Why Elliott Group chose SustainIQ

SustainIQ provides Elliott Group with a single platform to report on all areas of ESG, including GHG Emissions, Waste Management, Social Value, Biodiversity and much more. With over 150+ data points, API connectivity and a simple-to-use mobile web app, SustainIQ was a perfect fit to help Elliott Group resolve it's increasing number of ESG challenges.

BENEFITS FOR ELLIOTT GROUP FROM USING SUSTAINIQ

AUTOMATED DATAFLOWS VIA CONNECTIVITY AND INTEGRATIONS

SustainIQ integrates with Elliott Group's existing tech stack. Using the SustainIQ API, Elliott Group benefit from integrations with their ERP, Procore, and a number of integrations with Waste Contractors and Facilities to automate the flow of waste data. Moving forward, Elliott Group are exploring further integrations with their finance systems. Fully exploiting the power of automation, Elliott Group use SustainIQ to eliminate the need for manual data entry and get access to ESG performance via instantaneous calculations.

STANDARDISED METHODOLOGY ACROSS ALL FUTURE PROJECTS

Across every project, SustainIQ provides users with set forms and methodologies for every data point Elliott Group could need. Kicking off at their Cork Street site, Elliott Group's site teams now use SustainIQ's mobile interface to input data that's required to monitor ESG performance. Standardised capture methods will now result in more standardised and accurate data outputs, making it easier to analyse performance and extract insights to improve the business over time.

REAL-TIME, SITE-LEVEL REPORTING

When businesses use SustainIQ, they change the way they report. Data flows from the granular site level up, rather than office teams chasing information from the top down. Having access to data from the second it's inputted on the ground means Head Office can be more agile when it comes to identifying trends, potential issues or opportunities, ultimately meaning faster decision-making and quick wins toward a more sustainable future.

"We're delighted to be launching SustainIQ on our Cork Street Co-Living project in Dublin, setting a new standard for the way of ESG Reporting in our operations.

ESG has become a core tenet of our future strategy. Moving forward, SustainIQ is one of the most crucial aspects of ensuring we can deliver real-time and accurate reporting back to all of our stakeholders on our ESG performance and keep ourselves accountable as we work toward our longer-term sustainability goals."
